

Brief Introduction of COBIO Smart Healthcare Technology Co., Ltd.

COBIO Smart Healthcare Technology Co., Ltd. is committed to provide innovative and intelligent medical devices and services to our customers all over the world. We develop our products based on providing added values to our customers by focusing on user-oriented requirements. Our quality standards are always linked to the development of innovative products that meet the high customer expectations with regard to state-of the-art solutions, quality, precision and reliability, as well as user-friendliness, in order to achieve real benefits for everyone who works with our products every day. We integrate production, research and development, continuous learning and medical treatment to offer users intelligent overall medical solutions.

COBIO has a professional research and development team that covers many high-tech areas, including artificial intelligence, mechanical electronics, image recognition, internet and WLAN use and intuitive human-computer interaction in order to provide future-oriented solutions with a high degree of automation for veterinary urinalysis purposes. At the same time, COBIO is constantly cooperating with well-known clinicians and with leading professional companies from Germany, Hungary, Italy, the United States and Japan, which leads to further developments of modern urine analysis systems. This close networking leads to customer-oriented systems for biochemical analysis, the analysis of cells and particles and the biochemical immunoassays to deliver the complete urine status. The urine analysis solution provides extensive and accurate diagnostic results that allow veterinarians to initiate a fast and targeted therapy. For this, COBIO systems are valued worldwide and highly praised.

With the support of the Zhangjiang Management Committee and the China Medical Equipment Association, COBIO was the first to establish the Intelligent Medical Laboratory in China as a morphological intelligent diagnostic service platform. The biological cell morphological results can be shared and verified via the internet by a team of experts from scientific research laboratories. At the same time, the COBIO's Intelligent Medical Laboratory as a public research and development platform in Zhangjiang and as a training base of the China Medical Equipment Association makes its own contribution to the development of the industry
